0 Preliminaries and Units

1 Overview and Background

1.1	What is a Cluster of Galaxies?	
1.1.1	Optical	
1.1.2	X-rays	
1.1.3	Gravitational Lensing	
1.1.4	Sunyaev-Zel'dovich Effect	
1.1.5	Synthesis	
1.2	Geometry and Dynamics of the Universe	
1.2.1	Assumptions	
1.2.2	Metric	
1.2.3	Redshift	
1.2.4	Dynamics	
1.3	Parameters, Age, and Distances	
1.3.1	Forms of Matter	
1.3.2	Parameters	
1.3.3	Age and Expansion of the Universe	
1.3.4	Distances	

2 Evolution of the Dark Component

2.1	The Growth of Perturbations	
2.1.1	The Basic Equations	
2.1.2	Perturbation Equations	
2.1.3	Density Perturbations	
2.2	Statistics and Non-linear Evolution	
2.2.1	Power Spectra	
2.2.2	Evolution of the Power Spectrum	
2.2.3	Hierarchical Structure Formation	
2.2.4	Non-linear Evolution	
2.3	Spherical Collapse	
2.3.1	Collapse of a Homogeneous Overdense Sphere	
2.3.2	Connection to Linear Perturbation Theory	
2.3.3	Final Density of a Collapsed Dark Matter Halo	
2.3.4	Press-Schechter Mass Function	
2.3.5	Correct Normalization of the Press-Schechter Mass Function	
2.4	Structure of a Cluster	
2.4.1	Isothermal Sphere	
2.4.2	Navarro-Frenk-White Density Profile	
2.4.3	Cluster Substructure and Shape	

3 Evolution of the Baryonic Component

3.1	Non-radiative Physics	
3.1.1	Adiabatic Processes and Entropy	
3.1.2	Schwarzschild Criterion for Convective Instability	
3.1.3	Cluster Scaling Relations	
3.1.3.1	Cosmologist's Ideal Cluster	
3.1.3.2	Real Clusters	
3.1.4	Shocks	
3.1.4.1	Basic Equations	
3.1.4.2	Jump Conditions	
3.1.4.3	Contact Discontinuities	
3.1.4.4	Shock Mach Number	
3.1.5	Entropy Generation by Accretion	
3.1.5.1	Smooth Accretion	
3.1.5.2	Hierarchical Merging	
3.2	Radiative Physics	
3.2.1	Radiative Cooling	
3.2.2	Energy Feedback	
3.2.2.1	Feedback from Supernovae (core collapse/thermonuclear SNe)	
3.2.2.2	Feedback by Active Galactic Nuclei	
3.2.3	Transport Processes of Gas and Thermal Stability	
3.2.3.1	Turbulence	
3.2.3.2	Heat Conduction, Coulomb Logarithm	
3.2.3.3	Thermal Stability: Fields Length	
3.2.3.4	Thermal Stability with Magnetic Fields	
3.3	Non-thermal Processes	
3.3.1	Magnetic Fields	
3.3.1.1	Generating Magnetic Fields: Biermann Battery	
3.3.1.2	Evolution: Magneto-hydrodynamics	
3.3.1.3	Magneto-hydrodynamic Waves and Turbulence	
3.3.2	Cosmic Rays	
3.3.2.1	Diffusive Shock Acceleration (First-order Fermi Acceleration)	
3.3.2.2	Second-order Fermi Acceleration	
3.3.2.3	Cosmic Ray Transport	

4 Cluster Physics Informed by Different Observables

4.1	Optical: Galaxy Properties and Virial Theorem	
4.1.1	Observational Facts	
4.1.2	Galaxy Interactions and Transformations	
4.1.2.1	Tidal Stripping and Shocks	
4.1.2.2	Dynamical Friction	
4.1.2.3	Ram Pressure Stripping	
4.1.3	Virial Theorem	
4.1.3.1	Derivation	
4.1.3.2	Weighting a Cluster with Galaxies	
4.2	Gravitational Lensing	
4.2.1	Deflection Angle	
4.2.2	Lens Equation	
4.2.3	Circular Symmetric Lenses – Einstein Radius	

4.2.4	Lensing Potential and Local Lens Properties	
4.2.5	Strong and Weak Cluster Lensing	
4.3	X-rays: Astrophysics at High Resolution	
4.3.1	Hydrostatic Equilibrium Masses and Biases	
4.3.2	Kinematics of Shocks and Cold Fronts	
4.3.3	Probing Kinetic Equilibrium with Collisionless Shocks	
4.3.4	Width of Cold Fronts – Magnetic Draping	
4.4	Sunyaev-Zel’dovich (SZ) Effect: Cluster Calorimeter	
4.4.1	Thermal and Kinetic SZ Effect	
4.4.2	SZ Scaling Relation and Biases	
4.4.3	SZ Power Spectrum	
4.5	Diffuse Cluster Radio Emission: Powerful Shocks and Plasma Physics	
4.5.1	Radio Halos	
4.5.2	Radio Relics
