Regimes of CR driven instabilities

Shalaby, Thomas, CP (subm.)

• where $\alpha = \frac{n_{cr}}{n_i}$ is the CR number fraction, $m_r = \frac{m_i}{m_e}$ is the mass ratio, and γ_i is the Lorentz factor of CR ions

Introduction Intermediate instability Overview and applications

The intermediate-scale instability

Properties of the intermediate-scale instability:

- growth rate $\Gamma_{inter} \gg \Gamma_{gyro}$ and excites broad spectral support
- unstable modes are background ion-cyclotron waves in the comoving CR frame
- condition for growth:

$$rac{v_{
m dr}}{v_{
m A}} < rac{1}{2}\sqrt{rac{m_{
m i}}{m_{
m e}}}$$

< 🗇 🕨

Introduction Intermediate instability Overview and applications

The intermediate-scale instability

Properties of the intermediate-scale instability:

- growth rate $\Gamma_{inter} \gg \Gamma_{gyro}$ and excites broad spectral support
- unstable modes are background ion-cyclotron waves in the comoving CR frame
- condition for growth:

$$rac{v_{
m dr}}{v_{
m A}} < rac{1}{2} \sqrt{rac{m_{
m i}}{m_{
m e}}}$$

Implication of this new instability:

- couples CRs more tightly to background plasma and strengthens CR feedback in galaxies and galaxy clusters
- enables electron injection into diffusive shock acceleration
- decelerates CR escape from the sites of particle acceleration
 → brighter gamma-ray halos

Alfvén-wave regulated CR transport

comoving equ's for CR energy and momentum density (along B), ε_{cr} and f_{cr}/c², and Alfvén-wave energy densities ε_{a,±} (Thomas & CP 2019)

$$\begin{aligned} \frac{\partial \varepsilon_{\rm cr}}{\partial t} + \boldsymbol{\nabla} \cdot \left[\boldsymbol{\nu} (\varepsilon_{\rm cr} + \boldsymbol{P}_{\rm cr}) + \boldsymbol{b} f_{\rm cr} \right] &= \boldsymbol{\nu} \cdot \boldsymbol{\nabla} \boldsymbol{P}_{\rm cr} \\ - \frac{\boldsymbol{v}_{\rm a}}{3\kappa_{+}} \left[f_{\rm cr} - \boldsymbol{v}_{\rm a} (\varepsilon_{\rm cr} + \boldsymbol{P}_{\rm cr}) \right] + \frac{\boldsymbol{v}_{\rm a}}{3\kappa_{-}} \left[f_{\rm cr} + \boldsymbol{v}_{\rm a} (\varepsilon_{\rm cr} + \boldsymbol{P}_{\rm cr}) \right], \end{aligned}$$

$$\frac{\partial f_{\rm cr}/c^2}{\partial t} + \nabla \cdot \left(\boldsymbol{v} f_{\rm cr}/c^2 \right) + \boldsymbol{b} \cdot \nabla P_{\rm cr} = -(\boldsymbol{b} \cdot \nabla \boldsymbol{v}) \cdot (\boldsymbol{b} f_{\rm cr}/c^2) \\ - \frac{1}{3\kappa_+} \left[f_{\rm cr} - v_{\rm a}(\varepsilon_{\rm cr} + P_{\rm cr}) \right] - \frac{1}{3\kappa_-} \left[f_{\rm cr} + v_{\rm a}(\varepsilon_{\rm cr} + P_{\rm cr}) \right],$$

$$\begin{split} \frac{\partial \varepsilon_{\mathrm{a},\pm}}{\partial t} + \boldsymbol{\nabla} \cdot \left[\boldsymbol{v}(\varepsilon_{\mathrm{a},\pm} + P_{\mathrm{a},\pm}) \pm v_{\mathrm{a}} \boldsymbol{b} \varepsilon_{\mathrm{a},\pm} \right] &= \boldsymbol{v} \cdot \boldsymbol{\nabla} P_{\mathrm{a},\pm} \\ \pm \frac{v_{\mathrm{a}}}{3\kappa_{\pm}} \left[f_{\mathrm{cr}} \mp v_{\mathrm{a}}(\varepsilon_{\mathrm{cr}} + P_{\mathrm{cr}}) \right] - \mathcal{S}_{\mathrm{a},\pm}. \end{split}$$
